Biological Pullulan Foliar Anti-Transpirants via *Aureobasidium pullulans* Fermentation on Molasses Waste

REJECTED

This concept did **not** clear the framework.

The reasoning is published in full below.

Why it failed

- No head-to-head evidence

Assessment

Unrefined molasses fermentation by *A. pullulans* yields high-value exopolysaccharide anti-transpirant films in a rapid 3-5 day cycle. Bypassing pharmaceutical purification yields massive gross margins and allows disruptive pricing against incumbent chemical anti-transpirants.

Also flagged

- Duplicate references inflating the evidence base
- no_production_runsheet

A rejection is not a claim that the science is wrong. It means the venture case did not survive: the comparator was not what the buyer actually buys, the comparison was not like-for-like, the advantage fell short of a step change, or the capital and time to first revenue were prohibitive.
