Drought-Resilient Dark Septate Endophyte (DSE) Inoculants via Solid-State Fermentation of Agro-Medicinal Residues

CLEARED

This concept cleared all seven gates and every voiding sub-test.

Incumbent benchmark

MycoApply® Ultrafine Endo (Mycorrhizal Applications / Valent Biosciences)

Entry application

Brassicaceae crops (canola, broccoli, cabbage, komatsuna) under heat and drought stress

Measured advantage	0% colonization for incumbent AMF vs >30% root colonization for DSE in non-mycorrhizal Brassicaceae crops, representing a categorical capability advantage in the declared entry market.
Time to first revenue	12 months
Gross margin at parity	95.4%
Startup CapEx	\$205,000
Payback from first sale	4.9 months
Capital productivity	3.81x
Regulatory risk	Moderate — qualification costs reported (\$100,000 estimated)

BUY THE FULL DOSSIER

Mechanism, operating protocol with real conditions and yields, computed unit economics with a six-scenario stress test, the absence audit, and every resolved citation.
