Plant-Derived Exosome-Like Nanovesicles (PELNVs) via Continuous Tangential Flow Filtration

REJECTED

This concept did **not** clear the framework.
The reasoning is published in full below.
What the assessment found

Incumbent benchmark	PhytoCellTec Malus Domestica
Entry application	B2B wholesale supply of bulk active ingredients to cosmetic manufacturers for skin creams and serums
Measured advantage	none
Time to first revenue	6 months
Gross margin at parity	99.3%
Startup CapEx	\$114,265
Payback from first sale	0.1 months
Capital productivity	118.7x

Regulatory risk

Moderate — qualification costs reported (\$25,000 estimated)

Why it failed

- Voided by: Negative control / sub-2x

Assessment

The report provides strong unit economics, low CapEx, and rapid time to revenue within cosmetic regulatory frameworks. However, it fails superiority because it presents no quantitative head-to-head performance delta against the named incumbent (PhytoCellTec), relying instead on price discounting and qualitative claims of exosome intactness.

Also flagged

- Price parity asserted, not sourced

A rejection is not a claim that the science is wrong. It means the venture case did not survive: the comparator was not what the buyer actually buys, the comparison was not like-for-like, the advantage fell short of a step change, or the capital and time to first revenue were prohibitive.

Assessed 2026-08-27 against seven gates plus the voiding sub-tests. [How the method works](#) · [Browse all concepts](#)
