Ricinoleic-Crosslinked Polysulfide (RCP) Sorbents via Inverse Vulcanization

REJECTED

This concept did **not** clear the framework.

The reasoning is published in full below.

What the assessment found

Gross margin at parity	62.0%
------------------------	-------

Startup CapEx	\$182,000
---------------	-----------

Payback from first sale	1.7 months
-------------------------	------------

Capital productivity	15.67x
----------------------	--------

Why it failed

- Margin fails the operating-cost check

Also flagged

- Price parity asserted, not sourced
- runsheet_no_quantities

A rejection is not a claim that the science is wrong. It means the venture case did not survive: the comparator was not what the buyer actually buys, the comparison was not like-for-like, the advantage fell short of a step change, or the capital and time to first revenue were prohibitive.

Assessed 2026-09-02 against seven gates plus the voiding sub-tests. [How the method works](#) · [Browse all concepts](#)
